

How to Set up VPN on Android

1. Start with **Setting**. Go to **Wireless & Networks > More...> VPN**.

2. Configure **L2TP** by following these steps:
 - a. Go to **Add VPN profile** for connection establishment.
 - b. Indicate the default connection name, e.g. **NIDA_VPN**
 - c. Type : **L2TP/IPsec PSK**
 - d. Server : **vpnmobile.nida.ac.th**
 - e. IPSec pre-shared key : **vpn** (use small letter)
 - f. Select **Show advanced options**
 - g. Forwarding routes (e.g. 10.0.0.0/8) : **0.0.0.0/0**

- After recording all the designated settings, select the profile. To connect VPN, enter `abc.xyz@stu` or `@nida` in the **username** box followed by your **password**. Choose **Save account information**, and then click **Connect**. If the connection is successfully completed, the word **Connected** along with the **key sign** (🔑) will be shown in the top left-hand corner of the screen.
